Bivariate Regressions of (piq_cum20/rrate_cum20) on Nonmodel Variables, Rule Fixed Effects

Central Bank Author	R^2 = .13
Estimated	R^2 = .14
Calibrated	R^2 = .14
ln(Num. of Eq.)	R^2 = .13
Early Vintage	R^2 = .13
Mid Vintage	R^2 = .14
Late Vintage	R^2 = .14
Early Estimation	R^2 = .15
Late Estimation	R^2 = .15
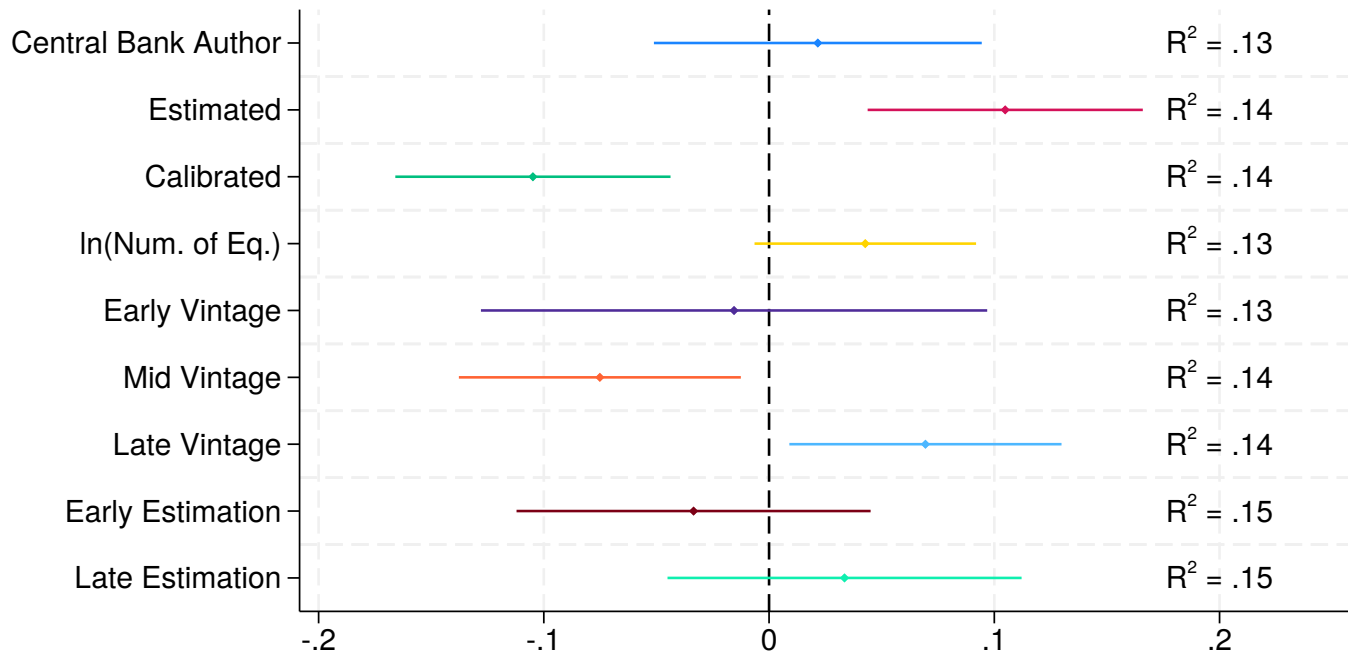

Bands represent 90% confidence intervals.
Regressions are of form: infl_per_rr20 = c + a*rule_tr + b*rule_g + beta*nonmodelvar
