Bivariate Regressions of Billsacrat40 on Model Variables, Rule Fixed Effects

Variable	R^2
Wealth Effect	$R^2 = .05$
Net Worth Effect	$R^2 = .1$
Bank Credit Effect	$R^2 = .08$
Other Channel	$R^2 = .08$
Learning	$R^2 = .06$
Open	$R^2 = .06$
Sticky Prices	$R^2 = .05$
Calvo Pricing	$R^2 = .09$
Rotemberg Pricing	$R^2 = .05$
Sticky Prices Other	$R^2 = .07$
Sticky Wages	$R^2 = .05$
Wage Indexation	$R^2 = .07$
Price Indexation	$R^2 = .06$
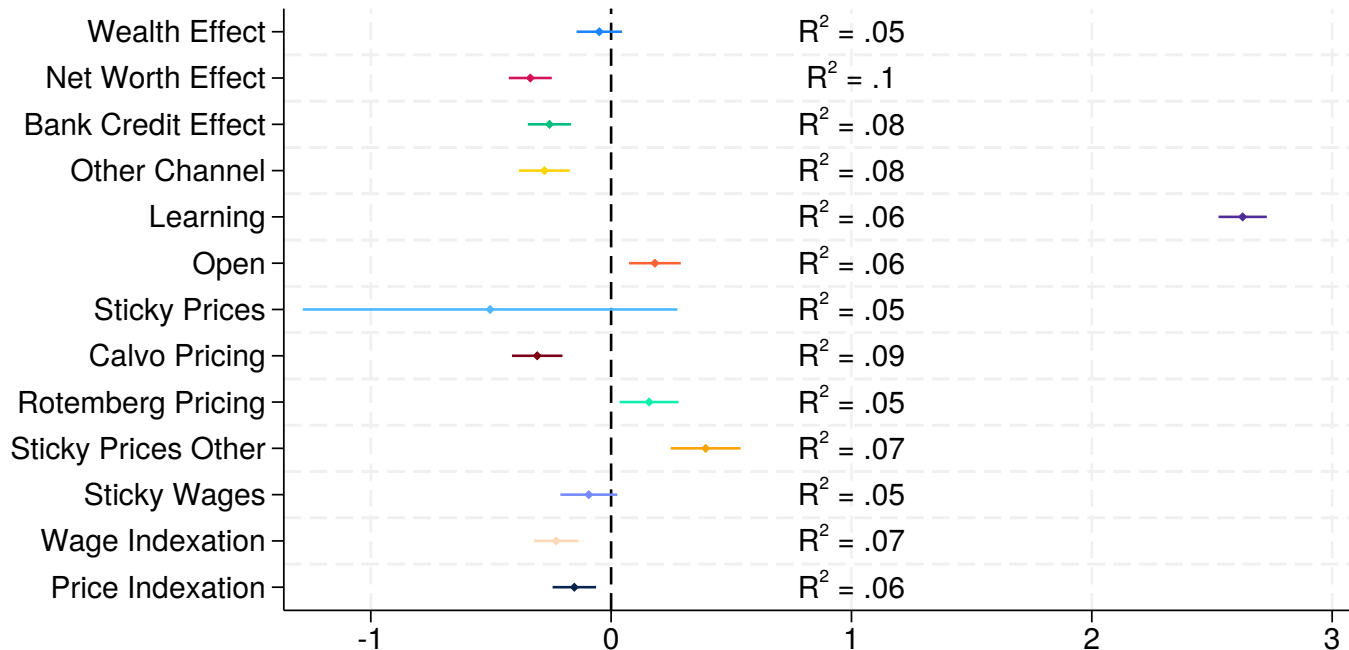

Bands represent 90% confidence intervals.
Regressions are of form: Billsacrat40 = c + a*rule_tr + b*rule_g + beta*modelvar
