Bivariate Regressions of π-slope on Model
Attribute Variables, Rule Fixed Effects

Wealth Effect	R^2 = .28
Net Worth Effect	R^2 = .37
Bank Credit Effect	R^2 = .3
Other Channel	R^2 = .29
Learning	R^2 = .31
Open	R^2 = .28
Calvo Pricing	R^2 = .28
Rotemberg Pricing	R^2 = .3
Sticky Prices Other	R^2 = .28
Sticky Wages	R^2 = .28
Wage Indexation	R^2 = .38
Price Indexation	R^2 = .42
	R^2 = .31
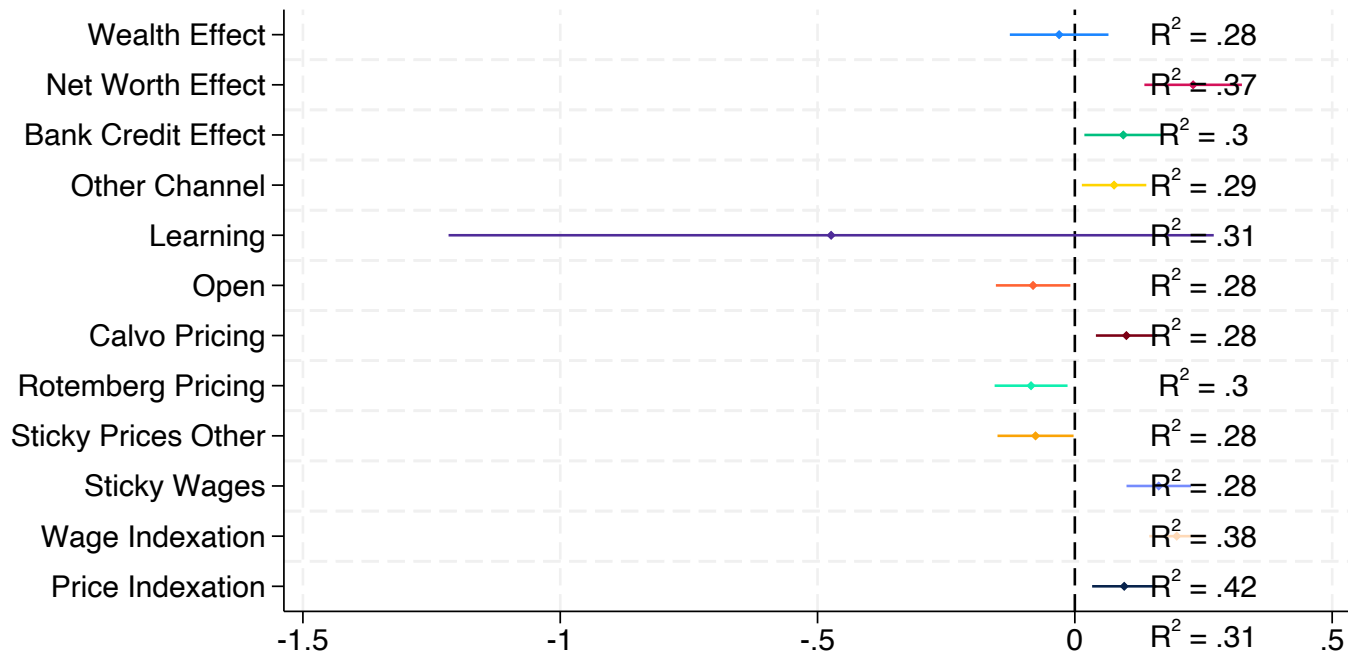

Bands represent 90% confidence intervals.
Regressions are of form: π-slope = c + a*rule_tr + b*rule_g + beta*(model attribute)
